

ROOTS-AI™ C-01 Canonical Question Bank v1.0.1 - CONTROLLED CORRECTION

This correction sheet is integral to the attached v1.0.0 human-readable PDF. It supersedes only the fields listed below. The authoritative executable source is the matching v1.0.1 CORRECTED XLSX.

Correction 1 - Required multi-select validation

For Q13, Q14, Q52, Q53 and Q54, replace “Zero or more approved option IDs” with: **“One or more approved option IDs required; empty array invalid; NONE/NA exclusive where provided.”**

Validation rule VAL-006 is correspondingly tightened: required multi-select questions must contain at least one approved option ID; an empty array is invalid; NONE/NA, where provided, is mutually exclusive with all other selections.

Correction 2 - Q73 N/A flag

Q73 remains optional free text. Change **allow_na = TRUE** to **allow_na = FALSE**. An unanswered optional Q73 is represented by a blank response, not by an invented N/A value.

Required-response rule

A required question is complete only when it contains a valid response defined by its response type, or an explicit approved N/A option where N/A is provided by the canonical question definition. Optional questions may remain unanswered. Required multi-select questions must not accept an empty array.

Integrity statement

No question wording, question ID, question order, module assignment, scoring-eligibility flag, option-set identity, reverse-scoring marker or Phase 1 visibility rule is changed by v1.0.1. Dataset controls remain: 73 questions, 13 modules, 40 scoring-eligible questions, 71 required questions and 2 optional questions.

ROOTS-AI™ C-01 Canonical Question Bank v1.0.0

APPROVED EXECUTABLE DATASET • Exactly 73 questions across exactly 13 ordered modules. Participant-facing English copy is authoritative. This proprietary beta wellness assessment is educational and non-diagnostic; it is not represented as a clinically validated diagnostic instrument.

M13	13	Confidence & Additional Context	Response confidence and optional participant context	Q72-Q73

Canonical Questions — 73 Records

Required/allow_na are explicit booleans. option_set_id refers to Option_Sets. conditional_logic is explicitly NONE because Phase 1 presents all 73 questions; Q57/Q59 allow N/A instead of being hidden.
